

Poseida Therapeutics Announces Series A Financing

La Jolla, CA, December 16, 2015: Poseida Therapeutics, Inc. ("Poseida"), a US-based, privately-held, human therapeutics company focused on the development of novel therapies using its ground-breaking proprietary genome engineering technologies, today announced that it has closed a Series A Preferred Stock financing. The lead investor, Malin Corporation plc. ("Malin"), an Irish-based global life sciences company, has agreed to contribute up to \$30 million. The remainder of the financing round is comprised of a number of other investors.

Poseida's platform technologies can be broadly applied to a vast array of human diseases. The company is currently developing gene therapies for orphan liver diseases and autologous Chimeric Antigen Receptor T-cell (CAR-T) therapies for cancer. In addition to its internal pipeline of product candidates, Poseida has an existing alliance with Janssen Biotech (JNJ) to develop allogeneic CAR-T therapies for the treatment of various cancers. Recent clinical data has shown that the CAR-T approach offers significant therapeutic potential.

CEO of Malin, Kelly Martin and Malin Chief Investment Officer, Adrian Howd, Ph.D., will also join the Board of Poseida.

Eric Ostertag, M.D. Ph.D., CEO of Poseida, stated "This investment by Malin will accelerate our therapeutics pipeline, including our unique CAR-T therapeutics and our first-in-class gene therapy products, which have the potential to cure patients with a single treatment. We are excited to work with Malin to provide new therapeutic options to patients with significant unmet medical need."

Adrian Howd, Chief Investment Officer of Malin, added: "Poseida offers Malin innovative science in the gene therapy, immuno-oncology and gene editing spaces, with utility across multiple therapeutic areas. Genome engineering offers a major advancement in therapy and this transaction reflects our belief that Poseida provides another best-in-class asset which will contribute to long term value for our shareholders."

About Poseida Therapeutics Inc.

Poseida is a therapeutics-focused biotechnology company using best-in-class genome engineering technologies to develop novel, life-saving treatments, including gene therapies for orphan liver diseases and immuno-oncology therapeutics for several types of cancer. Poseida's lead product candidates include a gene therapy treatment for the rare liver disease Progressive Familial Intrahepatic Cholestasis 3 and an autologous CAR-T therapeutic for multiple myeloma. Poseida is also partnered with Janssen Biotech (JNJ) to develop allogeneic CAR-T therapies for various cancers. Poseida owns several industry-leading technologies, including the piggyBac™ DNA Modification System, XTN™ TALEN and NextGEN™ CRISPR site-specific nucleases, and Footprint-Free™ Gene Editing (FFGE).
