Melinta Therapeutics Launches Antibiotic Baxdela™ (delafloxacin) in the United States

– Approved for adult patients with acute bacterial skin and skin structure infections (ABSSSI) –

– Provides coverage of gram-positive and gram-negative pathogens; only FDA-approved fluoroquinolone for methicillin-resistant Staphylococcus aureus (MRSA) –

– Interchangeable IV and oral formulations with the flexibility to initiate therapy with either –

NEW HAVEN, Conn., Jan. 29, 2018 (GLOBE NEWSWIRE) -- Melinta Therapeutics, Inc. (NASDAQ:MLNT), a commercial-stage company developing and commercializing novel antibiotics to treat serious bacterial infections, today announced the U.S. launch of intravenous and oral formulations of Baxdela™ (delafloxacin) for the treatment of adult patients with acute bacterial skin and skin structure infections (ABSSSI) caused by designated susceptible bacteria. With Baxdela, no dosage adjustments are required due to weight, hepatic impairment or mild-moderate renal impairment, there are no food effects, and there is minimal potential for drug interactions.

“Today’s launch of Baxdela is a significant milestone for Melinta – one that comes on the heels of a very successful year, cementing our leadership position in the antibiotics space,” stated Dan Wechsler, president & chief executive officer of Melinta. “I would especially like to thank the doctors and patients around the world that participated in our Baxdela clinical trial program, as well as the Melinta team that has worked tirelessly over many years to bring Baxdela to the market. It is because of their dedication that we are able to offer patients and healthcare providers this new treatment option.”

Approximately 14 million patients are treated for serious skin infections each year, either in the hospital or community settings, and these are often caused by MRSA.

“We believe that Baxdela will be an important treatment option for providers treating serious skin infections in both the hospital and community settings,” commented Mike McGuire, Melinta’s senior vice president, Commercial. “These patients often present treatment challenges owing to their underlying medical conditions (e.g., comorbidities such as obesity and diabetes), which can make optimal antibiotic selection difficult. The launch has the support of an experienced sales team and is further enhanced by the availability of three antimicrobial susceptibility tests that offer providers a full set of clinical tools to determine how to treat patients appropriately.”
Melinta will market Baxdela nationwide leveraging an industry-leading commercial sales team. Baxdela joins a strong portfolio of infectious disease products that will be marketed by Melinta, including Vabomere™ (meropenem and vaborbactam), Orbactiv® (oritavancin) and Minocin® (minocycline) for injection.

“Baxdela’s performance in clinical trials of skin infections demonstrated a good clinical efficacy profile and was well-tolerated,” said James A. McKinnell, MD, assistant professor of medicine, David Geffen School of Medicine, University of California, Los Angeles. “Microbiologic activity and clinical effectiveness against MRSA make Baxdela a novel fluoroquinolone with potential for treating certain skin infections.”

About Baxdela

Baxdela (delafloxacin) tablets and intravenous injection are approved by the U.S. Food and Drug Administration (FDA) for the treatment of ABSSSI (Acute Bacterial Skin and Skin Structure Infections). Baxdela was approved by the FDA in 2017 based on its efficacy against both gram-positive and gram-negative pathogens, including MRSA. It was given priority review by the FDA due to its designation as a Qualified Infectious Disease Product (QIDP) under the Generating Antibiotic Incentives Now (GAIN) Act of 2012. The QIDP designation qualifies Baxdela for certain incentives related to the development of new antibiotics, including a five-year extension of any non-patent exclusivity period awarded to the drug. For more information, please visit http://www.baxdela.com/ or call 1-844-Melinta.

INDICATION & USAGE

Baxdela is indicated in adults for the treatment of acute bacterial skin and skin structure infections (ABSSSI) caused by susceptible isolates of the following:

**Gram-positive organisms:** Staphylococcus aureus (including methicillin-resistant [MRSA] and methicillin-susceptible [MSSA] isolates), Staphylococcus haemolyticus, Staphylococcus lugdunensis, Streptococcus agalactiae, Streptococcus anginosus group (including Streptococcus anginosus, Streptococcus intermedii, and Streptococcus constellatus), Streptococcus pyogenes, and Enterococcus faecalis;

**Gram-negative organisms:** Escherichia coli, Enterobacter cloaceae, Klebsiella pneumoniae, and Pseudomonas aeruginosa.

**IMPORTANT SAFETY INFORMATION:**
**WARNING:** SERIOUS ADVERSE REACTIONS INCLUDING TENDINITIS, TENDON RUPTURE, PERIPHERAL NEUROPATHY, CENTRAL NERVOUS SYSTEM EFFECTS, AND EXACERBATION OF MYASTHENIA GRAVIS

Fluoroquinolones have been associated with disabling and potentially irreversible serious adverse reactions that have occurred together, including:

- Tendinitis and tendon rupture
- Peripheral neuropathy
Central nervous system effects

Discontinue Baxdela immediately and avoid the use of fluoroquinolones, including Baxdela, in patients who experience any of these serious adverse reactions.

Fluoroquinolones may exacerbate muscle weakness in patients with myasthenia gravis. Avoid Baxdela in patients with known history of myasthenia gravis.

Contraindications
Baxdela is contraindicated in patients with known hypersensitivity to Baxdela or other fluoroquinolones.

Warnings and Precautions
Risk of tendinitis, tendon rupture, peripheral neuropathy and central nervous system effects is increased with use of fluoroquinolones. Discontinue Baxdela immediately at the first signs or symptoms of any of these serious adverse reactions.

Avoid Baxdela in patients with known history of myasthenia gravis.

Hypersensitivity Reactions may occur after first or subsequent doses of Baxdela. Discontinue Baxdela at the first sign of hypersensitivity.

Clostridium difficile-associated diarrhea has been reported in users of nearly all systemic antibacterial drugs, including Baxdela. Evaluate if diarrhea occurs.

Prescribing Baxdela in the absence of a proven or strongly suspected bacterial infection is unlikely to provide benefit to the patient and increases the risk of the development of drug-resistant bacteria.

Adverse Reactions
The most common adverse reactions in patients treated with Baxdela were nausea (8%), diarrhea (8%), headache (3%), transaminase elevations (3%), and vomiting (2%).

Use in Specific Populations
In patients with severe renal impairment (eGFR of 15-29 mL/min/1.73 m²) dosing of Baxdela should be dosed at 200 mg IV every 12 hours or 450 mg orally every 12 hours. Baxdela is not recommended in patients with End Stage Renal Disease [ESRD] (eGFR of <15 mL/min/1.73 m²) due to insufficient information to provide dosing recommendations.

A FDA-approved patient labeling guide (Medication Guide) is available for patients taking Baxdela.

About Melinta Therapeutics
Melinta Therapeutics, Inc. is the largest pure-play antibiotics company, dedicated to saving lives threatened by the global public health crisis of bacterial infections through the development and commercialization of novel antibiotics that provide new and better therapeutic solutions. Its four marketed products include Baxdela™ (delafloxacin); Vabomere™ (meropenem and vaborbactam), Orbactiv® (oritavancin), and Minocin® (minocycline) for Injection. It also has an extensive pipeline of preclinical and clinical-stage products representing many important classes of antibiotics, each targeted at a different segment of the anti-infective market. Together, this portfolio provides Melinta with the unique ability to provide providers and patients with a range of solutions that can meet the tremendous need for novel antibiotics treating serious infections. Cautionary Note Regarding Forward-Looking Statements

Certain statements in this communication constitute “forward-looking statements” within the meaning of Section 27A of the Securities Act and Section 21E of the Securities Exchange Act and are usually identified by the use of words such as “anticipates,” “believes,” “estimates,” “expects,” “intends,” “may,” “plans,” “projects,” “seeks,” “should,” “will,” and variations of such words or similar expressions. We intend these forward-looking statements to be covered by the safe harbor provisions for forward-looking statements contained in Section 27A of the Securities Act and Section 21E of the Securities Exchange Act and are making this statement for purposes of complying with those safe harbor provisions. These forward-looking statements reflect our current views about our plans, intentions, expectations, strategies and prospects, which are based on the information currently available to us and on assumptions we have made. Although we believe that our plans, intentions, expectations, strategies and prospects as reflected in or suggested by those forward-looking statements are reasonable, we can give no assurance that the plans, intentions, expectations or strategies will be attained or achieved. Furthermore, actual results may differ materially from those described in the forward-looking statements and will be affected by a variety of risks and factors that are beyond our control.

Risks and uncertainties for Melinta include, but are not limited to: inability to achieve the expected benefits of the acquisition of The Medicines Company’s infectious disease business unit; liquidity and trading market for Melinta’s shares following the consummation of the acquisition; costs and potential litigation associated with the acquisition; risks related to the costs, timing and regulatory review of the Company’s studies and clinical trials; uncertainties in obtaining successful clinical results for product candidates and unexpected costs that may result therefrom; inability or the delay in obtaining required regulatory approvals for product candidates, which may result in unexpected cost expenditures; failure to realize any value of certain product candidates developed and being developed, in light of inherent risks and difficulties involved in successfully bringing product candidates to market; inability to develop new product candidates and support existing products; inability to commercialize and launch any product candidate that receives regulatory approval, including Baxdela; risks relating to the Company’s substantial indebtedness following the consummation of the acquisition and the Company’s anticipated capital expenditures, its estimates
regarding its capital requirements and its need for future capital; uncertainties of cash flows and inability to meet working capital needs; cost reductions that may not result in anticipated level of cost savings or cost reductions after the consummation of the acquisition; the approval by the FDA and EMA and any other similar foreign regulatory authorities of other competing or superior products brought to market; risks resulting from unforeseen side effects; risk that the market for the Company’s products may not be as large as expected; inability to obtain, maintain and enforce patents and other intellectual property rights or the unexpected costs associated with such enforcement or litigation; inability to obtain and maintain commercial manufacturing arrangements with third party manufacturers or establish commercial scale manufacturing capabilities; loss of or diminished demand from one or more key customers or distributors; unexpected cost increases and pricing pressures; the possibility of economic recession and its negative impact on customers, vendors or suppliers; and risks associated with the possible failure to realize certain benefits of the proposed transactions, including future financial, tax, accounting treatment, and operating results. Many of these factors that will determine actual results are beyond Melinta’s ability to control or predict.

Other risks and uncertainties are more fully described in our Annual Report on Form 10-K for the year ended December 31, 2016, as amended by Form 10-K/A, filed with the SEC on April 13, 2017, and in other filings that Melinta makes and will make with the SEC. Existing and prospective investors are cautioned not to place undue reliance on these forward-looking statements, which speak only as of the date hereof. The statements made in this press release speak only as of the date stated herein, and subsequent events and developments may cause our expectations and beliefs to change. While we may elect to update these forward-looking statements publicly at some point in the future, we specifically disclaim any obligation to do so, whether as a result of new information, future events or otherwise, except as required by law. These forward-looking statements should not be relied upon as representing our views as of any date after the date stated herein.
